

# KATDEMON *ink*®

## *TATTOO AFTERCARE*

- Remove your dressing 2-3hrs after your tattoo sitting.
- Wash your tattoo with warm water and non scented soap, you may shower, but do not soak your new tattoo in the bath until your tattoo is fully healed as this could cause your tattoo to lose ink.
- To dry your new tattoo, pat down with kitchen roll, not a towel as these can harbour bacteria.
- Apply a thin layer of Bepanthen to the tattooed area (please only use what is recommended by your artist) and do not over apply the cream as this can suffocate the skin.
- Clean your tattoo three times daily for 7-10days and continue to apply a thin layer of cream as needed to stop your tattoo drying out until healed (up to 3 weeks).
- DO NOT cover your tattoo, wear loose clothing and if you have to keep it covered due to the environment you are in, change your dressing every 2 hours.
- DO NOT rub, pick or scratch your new tattoo, this can remove the ink and could distort the image.
- AVOID exposure to sun, sunbathing, tanning beds, swimming and saunas until your tattoo is completely healed (usually around 3 weeks).
